

Steering Tool System

PARATRACK

HDD Guidance technology, developed and manufactured by Vector Magnetics, is rapidly being adopted as the HDD industry's recognized standard for underground guidance accuracy.

PARATRACK unique multiple source magnetic tracking capabilities continue to expand HDD installation applications. INROCK is Vector Magnetics' authorized distributor and HDD partner, providing **PARATRACK** equipment sales, rental, service and support.

PARATRACK 1 – Basic underground tracking system utilizing a single wire installed on centerline (surface) or inside an adjacent product line (underground) either in a single wire (earthed) or return coil configuration. A known, measurable magnetic field utilizing DC current is generated which allows tracking of the borehole drilling assembly. This feature is compatible with the majority of prior generation steering tools presently in the HDD market.

Setting the Standards for Superior Performance
